

**December 4, 2018**

**Effective tomorrow**, new fields will be added to the MLS to enhance the overall user experience and search functionality. These new fields will be available tomorrow but will not initially be required, allowing users time to gather the required information. This will also double the characters in public remarks (500 to 1,000), and enhance the number of photos (36 to 99).

**Updated Input Forms** *(Forms will be updated as needed)*

- Residential (12-01-18)
- Land (12-02-18)
- Multifamily (12-02-18)
- Residential Rental (11-26-18)
- Auction (11-28-18)
- Status Change (11-29-18)

**New Required Fields for Listings Input Before December 4** *(Complete Before January 7 to Avoid Interruption)*

- Residential New Required Fields
- Land New Required Fields
- Multifamily New Required Fields
- Residential Rental New Required Fields
- No New Required Fields for Auction

**January 7:** Omaha Area Paragon users will notice that the new required fields, are now required. This means an update to any listing (such as a price change, date extension, or any other data change) will trigger the new required fields to be updated. Also, on January 7, MLS Area Maps will no longer be present in the system. This change will impact users who are used to relying on this legacy system, however, the Google mapping feature built into the Paragon system will allow users to take advantage of new shape-drawing tools and will allow agents to save their most popular MLS area map searches. More information on this change will be available as the implementation date approaches.
